Exceptional design in a convenient storage space solution

RAUVOLET crystal-line: tambour door system with glass look

REHAU has added a versatile storage space concept to its portfolio with the RAUVOLET tambour door collection. The system enables designers and furniture producers to develop space-saving, design-oriented tambour door cabinets that blend seamlessly into kitchens, offices, bathrooms and living rooms. RAUVOLET crystal-line is a successful series of tambour doors with a high-quality glass effect – and the ‘complete’ variant now makes for the perfect design match. Slats, pelmets and running tracks match flawlessly in terms of materials and decorative designs. These qualities are especially evident in the new floor-to-ceiling version of RAUVOLET crystal-line. Combined for a design match with RAUVISIO surface finishes, huge scope for design is opened up – quite simply, enabling exceptional design.

From the modern kitchen-diner to the tiny but efficient apartment, tambour door solutions are a firm feature of modern interiors as space-saving cabinet locking devices. Cabinet designs with tambour doors combine generous storage space with a contemporary look. Through the RAUVOLET brand, REHAU offers a full range of tambour door solutions in various material and design variants. From classy glass laminates to trendy noble matt or the metal-effect industrial look, the collection contains all possible variants for frontages.

The floor-to-ceiling version of RAUVOLET crystal-line was a highlight of the SICAM event. Here, REHAU extends the classy look of glass to the entire cabinet height, including all guide rails and operating elements. The application possibilities are not limited to the kitchen but are also ideal for the home office and living rooms. Like many RAUVOLET variants, they can be ordered in a quantity of one. The renowned REHAU service can be accessed via the online tambour door configurator. In the case of applications not covered by the configurator, customers should address their enquiries to the sales division.

With its 50-millimetre-wide slats, RAUVOLET crystal-line produces an evenly harmonious frontage in which functionality is matched by appearance. REHAU also offers a full choice of decors, with matt surfaces exuding a surprising effect of depth in the new RAUVISIO crystal Deep collection. The range of decors, which extends from light to deep anthracite, is also available for RAUVOLET crystal-line. Aside from the variants described, REHAU offers even more opportunities for individuality: in the case of projects with specific colour requirements, RAUVOLET crystal-line is available in the Vario variant. This allows for custom colour requests (RAL shades) to be accommodated individually even in small order quantities for a specific project.

To put together the right design match from the REHAU surface range, customers can make use of the surface configurator to create individual furniture surfaces: <https://www.rehau.com/sites-en/interiors-surfaces-surface-configurator>.
